Project Proponent: The Coastal Resilience Delivery Team of the City of Boston Planning Department

Project Description: The RLFMP Flood Mitigation Planning & Feasibility Study aims to refine coastal protection options developed through CRS South Boston and advance the Master Plan sustainability and resilience vision by developing a feasible and implementable stakeholder-supported solutions that protect against current and future coastal flooding that support marine industrial uses and ship-to-shore transfer of goods. The Study, initiated by the Coastal Resilience Delivery Team of the City of Boston Planning Department in Spring 2023, is provided technical support by a consultant team led by Arcadis. The project team, working closely with stakeholders including Massport, marine-dependent businesses and other tenants, and the Boston Marine Park Business Association to complete an existing conditions analysis; risk and vulnerability assessments, alternative district-scale coastal resilience strategies and alignments, seeks to present and solicit community feedback on preferred alternatives.
